

About Us:

Napier Ventures Inc. (NAP) is a mining exploration and technology company, managed by a team of professionals that collectively have extensive experience in law, finance, technology and mining exploration and operations. Management is dedicated to advance the company and increase shareholder's value by development and commercialization of our flagship Arizona copper project, and by engaging in the search for value-adding mineral deposits through exploration and/or acquisition. Napier has advanced itself in to complementary technology companies suitable for the mining sector and other industries in a strategic and timely manner. We are focused on two complimentary technologies and are advancing these quickly.

Napier Ventures Inc. trades on the TSX-V exchange with the trading symbol NAP and OTCBB: NPRVF in the USA. Napier operates three distinct divisions; mining and mineral exploration, renewable energy and technology.

Our Mohave County, Arizona copper project encompasses over 1500 acres of claims with strong historical workings and reserves. We have a keen desire to increase the yield and to this end, have scheduled an aggressive work program in 2019, focusing initially on the Alum Wash area of our claims. It is believed the Alum Wash contains the source of the copper in the region, and presents the strongest potential to discover and develop mineral resources/reserves, timely. In parallel, Napier will continue to engage with Emerald Copper and their ongoing claim disputes. We continue to investigate and develop the potential for renewable energy on our sites as well.
